INSTALLATION GUIDE
ABOUT PULSE-EIGHT
Since being Founded in 2010, Pulse-Eight has been designing and manufacturing new and innovative video distribution solutions using the leading technology solutions available. Working with Motorola, Valens Semiconductor, Explore Semiconductor, Microsemi and many more solution providers we have been able to develop class leading, award winning products for our customers. Based in the heart of Poole our 12,000sqft manufacturing facility handled all manufacturing from design to finished products, ensuring ultimate quality for our customers and local UK based support any time of the day or week. In our 5th year we are now launching into new markets and territories.

CABLING ADVICE

WHAT IS THE BEST TYPE OF CABLE TO USE?
You can use Cat5e, Cat6, Cat6e, Cat7a, Cat7 or Cat7a with Pulse-Eight products. The baseline cable standard for this neo system is Cat5e. Slightly greater distances can be achieved by using Cat6, or slightly better still with Cat7, which has stricter shielding requirements and reduces potential cross talk between data pairs.

Whatever network cable type you choose, ensure that the main wiring architecture is solid core, not stranded patch cabling. Patch cabling can be used for the last few metres of a run (e.g. from a wall plate) but must be avoided over longer runs as signal transfer over stranded cores is heavily reduced.

The use of pre-made leads is not recommended unless you can be absolutely sure of their construction credentials (i.e. solid core 568B). Please note that CCA (Copper Clad Aluminium) cable is NOT supported.

SHIELDED CABLES
Unlike other systems, shielded FTP cable is not a stipulation. If, however, you prefer this type of cable please ensure compatible shielded accessories are used. Failure to terminate cable screen at all points can induce interference rather than eliminating it.

CABLING BEST PRACTICE
Our best practice policy is to terminate to a wall plate at either end and then use solid core patch cables (usually it is better to make your own than use pre-made) between the patch panel and the matrix and the wall plate and HDBaseT receiver.

HDBaseT WITH PATCH PANELS AND WALL PLATES
If the patch panels are terminated correctly, there is minimal loss of distance. The use of wall plates and patch panels, however, has the potential to cause increased resistance on the cable if not done correctly, introducing pinch points for signal transmission, and could reduce advertised transmission lengths. Instead of using RJ45 wall plates, you can use brush plates to maintain the neat finish.

CONNECTION TERMINATION
Terminate the cabling using RJ45 connectors to the 568B wiring standard. (See diagram)

IMPORTANT
Please note that local building regulations may apply to the installation of cabling in properties. It is important to check building regulations to guarantee that you are in accordance with the laws of your territory.
IMPORTANT CONCEPTS AND DEFINITIONS

When reading this manual we refer to devices that send video into the neo:8 Professional Matrix as source devices or sources. Examples of source devices include Blu-Ray players, Set Top Boxes, Game Consoles and Media Centres.

Devices that receive video from the matrix are called sink devices or sinks. Examples of these are Amplifiers (AVRs) TVs and projectors.

SETUP

neo modular is designed to be on and connected to an active internet connection at all times. It will operate correctly when not connected to a network (or the internet) but certain functions will not be available.

Connect a standard Ethernet cable (to only one of the two ethernet ports) from your router or network switch, cross over cables are not supported.

Inside the accessory box is the SD card that contains all the necessary information for your system, ensure this is fitted in the card slot on the front panel and remains fitted at all times.

Connect your source devices into the input ports using a High Speed HDMI cable or better (not supplied). It is recommended for future ease of use to connect devices from Input 1 to Input 8, although you can connect them in any order you wish. Depending on your system configuration, not all ports may be fitted or may support additional features not covered in this guide. If you are unsure about your configuration of your system please contact your distributor for more information.

Sink devices are connected via category cable (see cabling advise at the start of this guide) from the Output port to the supplied receivers. Note: If you have a mixed system of class a and class b outputs, ensure you use the correct receiver. For example, class a outputs connect to neo pro receivers and class b to neo lite receivers.

Complete the connection from the receiver to the Sink device (i.e. your TV) via a HDMI cable.

Once all connections have been made, turn the matrix on by connecting the power supply to the mains.

Note: There is no on/off switch on the matrix, it is designed to always be on.

CONNECTING RACK EARS

The supplied racking kit comes in two parts, the painted black ears are designed to be fitted to the front of the unit only, two M4 screws (supplied) are used to secure each. You can mount the system with the front ears only, however on taller racking systems the weight of the system may cause the item to sag in the rack. You can fit the supplied rear rack supports, using four M4 screws each, to provide further support.

POWER SUPPLY

Use the supplied mains power cables and connect both to the chassis. Do not use any other power cables with this product and always use both, ideally connected to different ring mains to provide redundancy.
THE FRONT PANEL

THE REAR PANEL

TECHNICAL SPECIFICATION

MATRIX
- HDMI 1.4 with 3D, 4K×2K (Ultra HD) support and HDMI 2.0a with HDCP 2.2
- Complies with HDBaseT Class A and B specifications
- Supports 2-way IR
- Web and serial based routing control
- Rack-mountable chassis
- 8 Modular inputs
- 8 Modular output

Width: 43cm
Height: 9cm
Depth: 30cm
Weight: 7.3kg

LITE RECEIVERS
- HDMI (340MHz)
- 70m / 230ft distance
- 4K ULTRA HD* support
- Lossless HDMI video and audio
- IR
- CEC
- Power over HDBaseT (PoH similar to PoE)

PRO RECEIVERS
- HDMI (340MHz)
- 100m / 300ft distance
- 4K ULTRA HD* support
- Lossless HDMI video and audio
- IR
- CEC
- Power over HDBaseT (PoH similar to PoE)

* When used with a HDMI 2.0 input module.
CONNECT TO THE WEB INTERFACE

To setup neo you need to use the built in web interface. This can be accessed from any locally connected device via Wi-Fi or a fixed wire connection.

You can access the neo web interface from a mobile, tablet, laptop or desktop PC. It is designed to work on Internet Explorer 10, Microsoft Edge, Firefox, Google Chrome and Safari.

RENAMING A SOURCE DEVICE

Click on the properties icon, enter a new name and click on Save Changes. Names must be 13 characters or less and cannot be blank, start with or end with a space, certain special characters are also not allowed. Custom names are displayed in the source menu in a CEC enabled TV*, updates should be reflected immediately but you may need to restart your TV to get some updates.

*where supported.

RENAMING SINKS

Click on the display icon, enter a new name and click on Save Changes. This name is purely cosmetic and only used within the web interface. The length restriction of 13 characters still applies.

CONFIGURING NETWORK SETTINGS

By default the matrix is set to retrieve an IP address via DHCP, you must connect the system to a router or server that has DHCP enabled. Once initially configured you can modify this setting and switch to a static IP address.

You must ensure that the new settings are correct before saving them as you will no longer be able to access the matrix if they are incorrect. In order for the internet based functions to operate such as the cloud based monitoring and gotomymatrix.com facility you must provide at least one valid DNS address. We recommend using the Google Public DNS address 8.8.8.8 for Primary DNS and 8.8.4.4 for Secondary DNS.

CONNECT TO THE WEB INTERFACE

To setup neo you need to use the built in web interface. This can be accessed from any locally connected device via Wi-Fi or a fixed wire connection.

You can access the neo web interface from a mobile, tablet, laptop or desktop PC. It is designed to work on Internet Explorer 10, Microsoft Edge, Firefox, Google Chrome and Safari.

GOTOMYMATRIX.COM

You can easily access the neo web interface by visiting www.gotomymatrix.com into any web browser, on any device, this will locate the matrix automatically on your local network.

USING THE WEB INTERFACE

Many of the controls in the user interface (UI) are drag and drop friendly. These drag drop actions will work on any device.

VIDEO ROUTING

The home page of the UI displays the current routing, devices in blue are active, we have detected they are powered up*. Select an input with a single click/press and the outputs that this input is routed to will be highlighted. Press again the same input to restore the normal display.

To change the routing of the matrix, drag the input and drop it on the output you want to send that video to. Once routing is successful a green success message will display. If for some reason this routing cannot be done a red error message will be shown explaining the reason.

You can also change the routing by click on the display icon on the output and then selecting the input from the drop-down list. You do not need to click save changes, the change is immediate.

*Due to certain HDMI limitations this may not be 100% accurate at all times.
**SETTING UP CEC**

Consumer Electronics Control (CEC) is a built-in technology within HDMI, widely supported in modern TVs, AVRs, Blu-ray players and Media Centers.

**INTRODUCTION**

neo has built-in support for all CEC implementations from different vendors, where possible we have included additional vendor-specific support to maximize compatibility. That said, implementation varies between different brands and continues to improve; certain features described in this manual may not be available on all makes and models in your setup. If we can detect that a feature is not supported, this incompatibility will be displayed in the web interface.

**DIFFERENT BRANDS**

Common brand names for CEC are: Anynet+ (Samsung), BraviaLink or BraviaSync (Sony), EasyLink (Philips), SimpLink (LG), VieraLink (Panasonic) Kuro Link (Pioneer) CE-Link and Regza Link (Toshiba), RIHD (Onkyo)

More and more devices are using the common name “HDMI-CEC”, often it is disabled by default, and you may need to enable it in the settings menu before continuing. (Consult the manual for your source or sink device on how to do this)

**HOW IT WORKS AND SWITCHING SOURCES**

Depending on the TV you are using will depend on exactly which button you press, for example, on a Sony TV you press the “Sync Menu” button, this brings up a menu, from here select HDMI Device selection and your source devices are listed, if you have customised their names, these names will be listed.

The order in which they are displayed may change from time to time, there is no ability to specify the sort order of devices in these lists. In other brands, simply pressing the “Source” button will list all of the devices alongside other inputs (such as Network or USB media).

---

**THIRD PARTY CONTROL DRIVERS**

You can control neo via IR, Serial or our recommended method, TCP/IP. We supply drivers for common control systems, including Control 4, AMX, Crestron, RTI and Elan. We are constantly improving our native integration with other platforms, more information and driver downloads are available at http://monitoring.pulse-eight.com/

**API REFERENCE**

We provide a fully documented API for neo, this is available in your monitoring portal (http://monitoring.pulse-eight.com/). You must be logged in to access it.

If you have questions, please speak with your distributor, we are not able to provide programming support directly.

---

**ACCESSING THE MATRIX WITHOUT AN INTERNET CONNECTION**

While neo works best with an active internet connection, it is possible to still configure and operate the system without one. However, to configure the system from its defaults, a local network connection is required. Normal operation of the CEC and IR control systems does not require any network connection, but IP-based API control or Web-based control does require a persistent network connection.

**DISCOVERY TOOL**

You can download a discovery tool from your monitoring portal at http://monitoring.pulse-eight.com/this program will run on Windows 7 or newer only, when run it will scan your network and detect the IP address of your matrix. If you have multiple neo systems on the same network, the discovery tool will only display the last found. If you do have more than one system, it is advised that you disconnect other systems first.

The discovery tool will display the IP address of the matrix, you can then access the matrix by typing that IP address into your web browser address bar.

It is recommended in this mode that you configure the networking to use a static IP address, this allows for you to bookmark the page easily and return to the web interface easily without needing to run the discovery tool again.
TROUBLESHOOTING

Should you encounter installation difficulties or issues with device communication, the following checklist of common issues and causes should help resolve your issues. If you still continue to experience issues, please contact your place of purchase.

NO OR POOR PICTURE QUALITY:

• Connected and powered? Double check all HDMI, Ethernet and power cables are firmly connected into the correct ports on all devices are correctly powered.
• Cable length? Are you approaching the maximum distance of the cable (70m) if so, adjust the picture quality or try using an additional extender kit to go further distance. Cables bundled together may cause cross talk and further degrade signal quality.
• Signal strength? The use of cable joins, stranded patch panels, wall outlands and stranded patch leads as interconnects between them, can significantly reduce signal strength. Use solid core straight through connections wherever possible.
• If you reduce the resolution of the source do you get a picture? If so, this suggests a conflicting resolution between source and display or a bandwidth capacity issue with your cable. Check all inputs and outputs share the same resolution capabilities.
• Picture ‘snow’ / HD ‘hoise’ signifies a failure to fully establish a signal and can often be caused by poorly terminated RJ45 connectors or excess cable lengths. Ensure your cable is correctly wired to 568B standards.
• Pink or off-colour picture? This could be caused by an invalid EDID or the source device failing to read the EDID from the matrix. Try re-booting the matrix and all source devices to force the re-reading of the EDID.
• Cable quality and condition - HDMI cable/connectors can easily be damaged and the quality of material can vary. Always use good quality leads and cables and try swapping cables that are known to be working into the solution to see if this improves your image.

IR CONTROL:

• Are the IR emitters and receivers correctly positioned to allow infrared signals to be transmitted and received? Emitters should be fixed firmly over infrared sensors of sources. Receivers should be attached to displays ensuring a clear line of sight to the remote control used to operate.
• Is your remote control powered and sending a signal? As IR is invisible to the naked eye, check your remote is transmitting a signal by viewing the remote handset sensor thought a digital camera/camera phone. The sensor should flash when a button on the handset is held down.
• IR signal dropout can be experienced due to exterior emissions of infrared radiation. Ensure emitters and receivers are away from direct sunlight. Halogen lighting and plasma screens may also interfere with IR signals.

COMMON ERROR CODES

<table>
<thead>
<tr>
<th>Error Code</th>
<th>LCD Error Message</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1002</td>
<td>Insert Valid SD Card</td>
<td>Insert the SD card supplied with the system. This will be found in the accessory box.</td>
</tr>
<tr>
<td>1003</td>
<td>Right Protect Mode</td>
<td>Remove the SD card, slide the lock to the opposite position and re-insert the card.</td>
</tr>
<tr>
<td>1021</td>
<td>Local Net Failure</td>
<td>The matrix is unable to ping the router, ensure the network configuration is correct. This can be modified by editing the ‘settings.ini’ file contained on the SD card.</td>
</tr>
<tr>
<td>1022</td>
<td>Remote Net Failure</td>
<td>The system is unable to reach Google public DNS server 8.8.8.8. Ensure the network configuration is correct, this can be modified by editing the ‘settings.ini’ file contained on the SD card.</td>
</tr>
<tr>
<td>1025</td>
<td>EDID Read Failure</td>
<td>The system is unable to read the EDID from the sink device connected to the specified port on the CLCD screen, this is likely caused by a faulty HDMI cable between the receiver and the TV. Try replacing the cable or connecting to a different port on the TV/sink device.</td>
</tr>
<tr>
<td>1031</td>
<td>Invalid Module</td>
<td>The module specified on the CLCD screen is inserted into the wrong port, ensure that only output modules and connected to output ports and only input modules are connected to input ports.</td>
</tr>
</tbody>
</table>

Additional error codes are available on the monitoring portal along with resolution tips.
The Limited Warranty gives you specific legal rights. You may also have other legal rights that vary by state, province or jurisdiction.

1. WHAT THIS LIMITED WARRANTY COVERS PERIOD OF COVERAGE.

Pulse-Eight Limited, B. B. J. adheres to all applicable laws and welcomes the owner of the enclosed product that the product contained in this box (“Product”) and is free from defects in materials and workmanship for a period of ninety (90) days from the date of delivery to original purchaser (“Warranty Period”). In the event of a defect in materials and workmanship of the Product, Pulse-Eight will, at its sole discretion, (a) repair or replace any defective Product or component; or (b) accept the return of the Product and refund the money actually paid by the original purchaser for the Product. Repair or replacement may be made with a new or refurbished component or products, at Pulse-Eight’s sole discretion.

2. TOTAL SATISFACTION RETURN POLICY

Pulse-Eight is committed to ensuring that our products meet the highest standards of quality and reliability. As such, we offer a 30-day money-back guarantee on all purchases. If you are not completely satisfied with your Pulse-Eight purchase, you may return it in its original condition within thirty (30) days of the original purchase and receive a full refund. If you have a professionally installed product, you must check with your installer within thirty (30) days of the original purchase and receive a full refund. If you are the original purchaser of the Product and you are not satisfied with this Product for any reason, you may return it in its original condition within thirty (30) days of the original purchase receipt for a full refund. If it is a professionally installed product, you must check with your installer regarding its return policy.

3. WARRANTY CONDITIONS; HOW TO GET SERVICE IF YOU WANT TO CLAIM UNDER THIS LIMITED WARRANTY

Before being able to claim under this Limited Warranty, the owner of the Product must (a) notify Pulse-Eight of the intention to claim by emailing support@pulse-eight.com during the Warranty Period and provide a description of the alleged failure, and (b) comply with Pulse-Eight’s return shipping instructions, and (c) send the Product at owner’s cost (except where prohibited by applicable law) to Pulse-Eight for repair or replacement. Pulse-Eight will determine, in its reasonable discretion after examination of the returned Product, whether a failure is the result of an eligible or ineligible Product, for which owner will bear all costs of return shipping to owner, except with respect to any Product that has either been repaired or replaced under Pulse-Eight’s obligations under the terms of this Limited Warranty for the longer of ninety (90) days from the date of delivery or the remaining Warranty Period. This Limited Warranty is transferable from the original owner to any subsequent owner of the Product, provided that the Product is returned to Pulse-Eight in accordance with the Installation Guide or other instructions provided by Pulse-Eight.

4. WHAT THIS LIMITED WARRANTY DOES NOT COVER

This warranty does not cover the following (collectively, “Ineligible Products”): (a) malfunctions or failure due to: (i) accident, neglect, abuse, unreasonable use, improper maintenance or repair; (ii) handling, storage, installation, testing, or use not in accordance with the Installation Guide or other instructions provided by Pulse-Eight; (iii) abuse or misuse of the Product; (b) alterations, fluctuations, interruptions in electric power or the telecommunications network; (c) acts of God, including lightning, fire, flood, earthquake or hurricane. This warranty does not cover consumable parts, including batteries, unless damage is due to the defectiveness of the Product or software (even if packaged or sold with the product). Pulse-Eight recommends you use only authorized service providers for maintenance or repair. Unauthorized use of the Product or software can impair the Product’s performance and may void the Limited Warranty. Pulse-Eight does not warrant that operation of the Product will be uninterrupted or error-free, or that the Product will in every case process all data correctly. In addition to the above, some of the limitations set out above may not apply to you.

5. DISCLAIMER OF WARRANTIES

Pulse-Eight does not warrant that operation of the Product will be error-free or uninterrupted or that the Product will in every case process all data correctly. The disclaimers, exclusions, and limitations of liability under this Limited Warranty will not apply to the extent prohibited by applicable law. For a full description of your legal rights you should refer to the laws applicable in your jurisdiction and you may wish to contact a relevant consumer advisory service.

6. LIMITATION OF DAMAGES

Pulse-Eight disclaims all liability of any kind of Pulse-Eight’s suppliers. The Pulse-Eight online services (“Services”) may provide you information (“Product Information”) regarding your products performance and/or peripherals connected to your product (“Product Peripherals”). The type of Product Peripherals that may be connected to your Product may change from time to time. Without limiting the generality of the disclaimers above, all Product Information is provided for your convenience. “AS IS” AND “AS AVAILABLE”. Pulse-Eight does not represent, warrant, or guarantee that Product Information will be available, accurate, or reliable. You use Product Information, the Services, and the Product at your own risk. Pulse-Eight will be solely responsible for any loss, damage, expense, or injury, including, but not limited to, death, and any claims, demands, losses,逸 justice, suits, and legal actions, including to your HVAC system, plumbing, home, property, or personal possessions, whether due to negligence or otherwise, caused by or relating to any Product, Product Information, the Services, or the Product Peripherals. Pulse-Eight does not have responsibility for any loss, damage or injury, including to your HVAC system, plumbing, home, property, or personal possessions, whether due to negligence or otherwise, caused by or relating to any Product, Product Information, the Services, or the Product Peripherals. Pulse-Eight also limits the duration of any implied warranties to the Warranty Period.

7. LIMITATION OF LIABILITY

Nest Labs also limits the duration of any implied warranties to the Warranty Period. In addition, Pulse-Eight does not warrant that operation of the Product will be error-free or uninterrupted or that the Product will in every case process all data correctly. For a full description of your legal rights you should refer to the laws applicable in your jurisdiction and you may wish to contact a relevant consumer advisory service.
